ADTECH SYSTEMS

AV DESIGN & INTEGRATION SERVICES

EXCEPTIONAL ENGINEERING

An AV system is a big investment. Your audio visual integrator needs to be reliable, trustworthy and highly skilled if you are to get a system that works flawlessly every time you have an important meeting or event.

From the beginning, our philosophy has been to attract and keep the best talent, train them carefully, then rely on them to take care of our customers. Our staff's exceptional engineering skills have allowed us to attain a leadership position in videoconferencing and distance learning, presentation systems, interactive classrooms, digital infrastructure, streaming applications, home theater and home automation, and advanced audio, including sound systems for performing arts centers, houses of worship and other challenging environments.

We founded our company more than 20 years ago selling and installing very simple projection and sound systems. We gradually added to our skills and capabilities, so that today we routinely complete the largest and most sophisticated projects. We have not lost sight of our roots, however, and continue to cater to our small customers as well as our large.

WORLD CLASS SERVICE

Our employee base is one of the most knowledgeable and experienced of any AV integrator anywhere. Our engineers average over ten years of AV industry experience and our programmers over five. Each of our project managers has been with the company for at least 10 years.

Our unusually low employee turnover means that you will find the same people serving you year after year. Should you decide to update your system, the engineer who originally designed it will most likely design the upgrade. Should a problem develop, the people who originally programmed it and the technicians who installed it will be involved in finding a solution.

For those reasons, and because of the skill that comes out of our deep level of training and experience, our work is normally faster, more reliable and less expensive than other audio visual integrators.

LOCAL FOCUS

ADTECH Systems has the largest employee and resource base of any AV integrator in New England. Other integrators talk about their size, but their staff and capital are spread out across the country and are difficult to bring to bear on any regional project. With over 85 employees based in New England, including more than 50 engineers and technicians, ADTECH Systems is far better equipped to help local organizations with local projects.

COMMITMENT TO OUR CUSTOMERS

A local, loyal staff is a hardworking staff, dedicated to your needs and your satisfaction. Our team of engineers, project managers, sales and support people realize that it's their individual initiative and responsibility that make the difference for our customers. They take pride in their work, as we take pride in them. We back up their commitment with a comprehensive on-site warranty and a willingness to go the extra distance to make sure the large and small systems we install perform flawlessly. If you're looking for an exceptional, cost-effective AV system built for the long term and backed up with reliable, local support, look to ADTECH Systems.
