SPL Integrated Solutions

We Make Meetings Work

As technology evolves, more organizations are choosing to improve productivity and reduce communication costs by merging their audio/video (AV) and information technologies (IT) systems over converged IP networks. SPL Integrated Solutions is at the forefront of this new wave, having successfully implemented enterprise-wide, real-time collaborative systems that have made meetings and events work at Fortune 1000 corporations, educational institutions and government agencies.

SPL provides customized systems and services that allow people to connect for working sessions and formal presentations no matter where they are located. Each system is designed with the client's unique culture and needs in mind. Far more than a provider of technology, SPL is a strategic partner with each client.

Our International/National Delivery Systems Knows No Boundaries

SPL is the only company of its kind with a national and international delivery system that provides clients with consistent procedures, compatible systems and coordinated solutions no matter how many locations the installation involves. Our network of national offices and international partners provide professional expertise and office-to-office consistencies that guarantee satisfaction whether in New York, Los Angeles or London.

Unmatched Engineering Expertise

Today's integrated systems require a unique combination of AV and IT expertise and experience. As the leading integrated solutions provider, SPL has some of the best AV engineers, project managers and technicians in the country. Over two-thirds of SPL employees have technical training. No project is too challenging for the experts at SPL.

Thanks to our engineering expertise and market leadership, SPL has successfully integrated products from all the leading vendors in our industry:

Integrating the Right Communication System

In this era of global instant communication, a challenge for today's organization is to use the most cost-effective communication system to improve its productivity. There usually is no need to make a video call for a ten-minute meeting, but for the President's company-wide presentation to be effective, you'll need the visual impact of an enterprise-wide videoconference system. SPL will partner with you to make your meetings and events more productive. And, as an added benefit, you'll be more productive because you're spending less time in an airport and more time in your office.

Best Presentation Rooms (BPR) Contest,
Classroom and Training Facilities Category

In addition to designing and integrating collaborative communication systems, SPL offers a unique suite of Managed Conferencing Services, is the leading integration company for large-scale audio and video performance systems, and, as Texel/SPL, provides infrastructure cabling networks.

Managed Conferencing Services (MCS)

For your systems to successfully boost productivity and reduce costs, optimum performance is crucial. SPL's Managed Conferencing Services make the difference, ensuring that your equipment and systems function properly and providing immediate assistance when the unexpected happens. Our industry-leading service programs include onsite support, offsite support or a mixture of both. Services include full-time on-site technicians, network design and consulting, a 24-hour international help desk, 24-hour break/fix support and management reporting.

Performance Systems

No integration company has more experience at installing large scale, audio and video performance systems than SPL. These systems enhance the experience at venues like professional sports stadiums and arenas, theaters, casinos, theme parks and museums. If we can install the speakers for a new NFL football stadium, imagine what we can do for your boardroom!

SPL is especially proud of the systems it has installed in numerous churches and worship spaces throughout the country.

Texel/SPL

Texel/SPL provides network infrastructure and IP solutions for the transmission of voice, data, audio, video and communication systems. It is a market leader in the provisioning of high performance networks supporting enterprise premise, office building and campus communication services.
